SKÖVDE HOSPITAL

REFURBISHMENT WITH Sarnafil® TS 77

BUILDING TRUST

SKÖVDE HOSPITAL SWEDEN

PROJECT DESCRIPTION

Skaraborg Hospital in Skövde is the largest unit within Skaraborg Hospital. It offers a wide range of well-developed specialties. Many unique skills and methods are developed there where research is ongoing in most specialties.

The reconstruction has been ongoing for some time, and hospital board has now given the go ahead to the next phase, which means that 14 wards are going to be refurbished. Additionally, they will add new buildings in the hospital areas southeast corner. There, children and women's health services get new facilities where there is a coordination of anything related to children and adolescents, from the care of premature babies through childbirth to care for children and young people.

This phase of the redevelopment will continue in stages until 2019. The new maternity ward is expected to be completed in July 2015.

The total price for all the building planned at Skaraborg Hospital in Skövde, is SEK 160 million.

PROJECT REQUIREMENTS

When the main hospital was built in the early 1970s, both the requirements and the construction technology were different then it is today. And today, 40 years later, the hospital has been renamed to Skaraborg Hospital Skövde and will slowly be modernized.

Now it's important to build for the flexible operation and especially remove hazardous substances like PCBs, found in soft joints. It was classified as a pollutant just a few years after the construction was completed.

Our most current General Sales Conditions shall apply.
Please consult the Data Sheet prior to any use and processing.

SIKA SOLUTIONS

Sarnafil® TS 77-15ER Traffic White.

Sika was at an early stage involved in the planning of this project. Throughout the renovations it has been essential to use sustainable products so it was an obvious choice to use Sikas membrane Sarnafil® TS 77-15ER since it does not contain any hazardous or harmful substances.
